

The 87 Revenue Pipelines

An illustrated catalog. Every income line on its own, in plain language, with a diagram showing who supplies it, what KICC does, and who pays.

Version 3.0 · September 2026

This document rebuilds the full pipeline catalog so that each of the 87 lines can be read and understood on its own page space, and sets it against the consolidated revenue plan and the pipeline-level workbook. Where the earlier catalog listed the lines, this version shows each one as a flow: what comes in, what the platform does with it, who the buyer is, and exactly how the money is made.

87

revenue pipelines

13

categories

12

ways the money is actually
made

5

financial years modelled

Every figure in this document is a modelled estimate, not a sourced market size. The per-pipeline values come from the pipeline-level workbook; the five-year revenue, advertising and target figures come from Consolidated Revenue Plan v2.0 (the all-Year-1 launch model). Sums are stated in Kenya Shillings; where US dollars appear, the rate used is KES 129 to the dollar, as in the plan. Please see the method note at the end before using any number for budgeting or fundraising.

How the plan makes its money

Three separate things sit inside the plan and it helps to keep them apart. The **catalog** is the list of 87 ways KICC earns. The **model** turns that list into money for five years. The **media schedule** says what it costs to bring the buyers in. This part walks through all three, and the diagrams show the shape of each one.

1. The one idea behind the whole plan

KICC does not earn from building things first and selling later. All 87 pipelines are open from Year 1. What changes from year to year is not which lines exist but how many sellers, buyers and investors have actually joined each one. That adoption curve, not a construction timetable, is what produces the revenue.

The curve is the same for every pipeline: **15% of full-maturity revenue in Year 1, then 45%, 75%, 95% and 100% in Year 5.** Any difference between categories comes from how much a category is worth when it is full, not from when it started.

The adoption ramp applied to all 87 pipelines

The adoption ramp. Nothing in the model depends on a pipeline starting late; everything depends on how fast people join it.

2. The money, year by year

Advertising and media spend is deducted before the net figures, because that spend is the cost of acquiring the sellers and buyers the model depends on. It is treated as a cost, not a revenue line.

Measure (KES)	Year 1	Year 2	Year 3	Year 4	Year 5
Gross revenue	896,175,000	2,688,525,000	4,480,875,000	5,675,775,000	5,974,500,000
Advertising and media cost	125,464,500	295,737,750	403,278,750	397,304,250	358,470,000
Net revenue after advertising	770,710,500	2,392,787,250	4,077,596,250	5,278,470,750	5,616,030,000
Net run-rate at year-end (per month)	64,225,875	199,398,938	339,799,688	439,872,563	468,002,500
Target run-rate (per month)	1,548,000,000	1,548,000,000	1,548,000,000	1,548,000,000	1,548,000,000
Shortfall against target (per month)	1,483,774,125	1,348,601,062	1,208,200,312	1,108,127,437	1,079,997,500

Source: Consolidated Revenue Plan v2.0, sections 1, 2 and 3. The target is USD 12,000,000 a month, which at KES 129 equals KES 1,548,000,000 a month and KES 18,576,000,000 a year.

Gross revenue, the advertising cost of getting it, and what is left. The gap between gross and net narrows as the brand matures and paid reach is replaced by word of mouth.

Two things are worth noticing. First, Year 1 revenue is four times larger than the earlier staged-launch model produced, simply because all 87 lines now contribute from the start instead of waiting their turn. Second, the plan does not reach its own target inside five years, and the document says so plainly. The shortfall is dealt with in section 8 below.

3. Where the money comes from

At full maturity the catalog is worth **KES 5,974,500,000 a year** before advertising, across 13 categories. Agriculture is the largest at 23%, and the top four categories together carry about three quarters of the total, which is a concentration the risk register flags directly.

Year 5 revenue by category (KES) - 13 categories, 87 pipelines

Full-maturity revenue by category. Agriculture, Commerce, Tourism and Real Estate do most of the work.

Where the Year 5 money comes from

The same numbers as shares. Four categories carry roughly 75% of the total.

Category	Lines	Year 5 revenue	Share	Year 5 advertising	Screentime	Airtime
Agriculture	15	1.47bn	25%	88.2m	26.5m	61.7m
Commerce, marketplace and discovery	10	810.0m	14%	48.6m	31.6m	17.0m
Tourism and hospitality	7	787.5m	13%	47.2m	35.4m	11.8m
Real estate and property	6	457.5m	8%	27.4m	19.2m	8.2m
Minerals and natural resources	6	424.5m	7%	25.5m	10.2m	15.3m
Rental expansion and the core rating engine	5	420.0m	7%	25.2m	17.6m	7.6m
Flagship venues, investment and bulk trade	7	367.5m	6%	22.1m	14.3m	7.7m
Financial services and capital	7	345.0m	6%	20.7m	12.4m	8.3m
Logistics and trade	4	217.5m	4%	13.1m	6.5m	6.5m
Industrial, manufacturing and the special economic zones	5	210.0m	4%	12.6m	7.6m	5.0m
Additional sectors	8	210.0m	4%	12.6m	6.3m	6.3m
Energy and infrastructure investment	4	127.5m	2%	7.7m	4.2m	3.4m
Government and public sector	3	127.5m	2%	7.7m	2.7m	5.0m
Total	87	5.97bn	100%	358.5m	194.5m	164.0m

Year 5 values come from the pipeline-level workbook (steady-state value x the 1.5 scale factor, all pipelines matured). Advertising is 6% of revenue in Year 5, split by each category's channel mix. Percentages may not sum to 100 because of rounding.

4. How the money is actually made

Before looking at the individual lines, it is worth seeing the pattern. The 87 pipelines are built from only **twelve distinct ways of earning money**. Most of the catalog is one of three things: a commission on a trade KICC has verified, a success fee for introducing an investor to an opportunity, or a recurring subscription for a service a business needs every month anyway.

Full-maturity revenue grouped by mechanism. Trade commissions and investment matchmaking alone account for well over half.

How the money is made	Lines	Year 5 revenue	What it means in practice
Trade commission	32	3.29bn	KICC takes a percentage of a transaction it has verified or matched.
Bundled experience	7	877.5m	KICC sells the whole trip as one package as merchant of record and takes a blended commission.
Booking or ticketing	13	525.0m	A commission on a booking, a ticket or a hire.
Investment matchmaking	12	424.5m	KICC introduces an investor to an opportunity and charges a success fee on the committed amount.
Subscription	5	210.0m	A flat recurring fee, earned whether or not the client trades.
Referral or embedded distribution	6	210.0m	KICC passes a customer to a partner (an insurer, a lender, a professional) and takes a share.
Lending and financing	2	142.5m	KICC advances money and earns the margin. Needs a licence.
Advertising and visibility	2	112.5m	A seller or a county pays for visibility, within a fairness rule that paid placement can never outrank an earned rating.
Data or API licensing	2	75.0m	KICC licences aggregated, anonymised information it already holds.
Equity and capital	1	75.0m	KICC takes a stake, or introduces a business to an outside investor.
Treasury float	1	30.0m	Interest earned on money held in escrow while it waits to be released.
Enabler - carries no direct fee	4	0	No fee of its own. It makes other lines work, and is counted inside them so nothing is double-counted.

Four lines are counted at zero direct revenue on purpose: the diaspora gateway (43), the government portal lead-scoring tool (53), the universal rating engine (79) and the airline agreement network (82). Their value shows up inside the lines they feed, and counting them separately would double-count it.

5. What the advertising money buys

Advertising and media spend starts at 14% of revenue in Year 1 and falls to 6% by Year 5. The fall is an assumption, not a saving already banked: it holds only if repeat use and word of mouth genuinely replace paid reach. The absolute amounts still rise with revenue, from KES 125.5 million in Year 1 to KES

358.5 million in Year 5. Over the five years the plan spends **KES 1,580,255,250** on advertising and media, about 54% of it on screentime and 46% on airtime.

Year 5 advertising by category and channel. Tourism and Real Estate buy mostly visual formats; Agriculture and Government buy mostly radio, SMS and USSD.

The split is not arbitrary. It follows where each sector's buyers actually are. Agriculture puts 70% into airtime because smallholder farmers are reached through vernacular and county radio, and reserving screentime for the export-facing crops where the buyers are corporate. Tourism does the opposite, 75% screentime, because people research a trip visually. Government puts 65% into radio and SMS because county service messages travel better that way. Minerals and Industrial sit at 60/40 towards airtime to reach investors through business press and targeted radio rather than mass television. Logistics and Additional Sectors run straight down the middle at 50/50, with budget following campaign-by-campaign test results.

Category	Year 1	Year 2	Year 3	Year 4	Year 5	Five-year total
Agriculture	30.9m	72.8m	99.2m	97.8m	88.2m	388.8m
Minerals and natural resources	8.9m	21.0m	28.7m	28.2m	25.5m	112.3m
Industrial, manufacturing and the special economic zones	4.4m	10.4m	14.2m	14.0m	12.6m	55.5m
Energy and infrastructure investment	2.7m	6.3m	8.6m	8.5m	7.7m	33.7m
Real estate and property	9.6m	22.6m	30.9m	30.4m	27.4m	121.0m
Tourism and hospitality	16.5m	39.0m	53.2m	52.4m	47.2m	208.3m
Commerce, marketplace and discovery	17.0m	40.1m	54.7m	53.9m	48.6m	214.2m
Logistics and trade	4.6m	10.8m	14.7m	14.5m	13.1m	57.5m
Financial services and capital	7.2m	17.1m	23.3m	22.9m	20.7m	91.3m
Government and public sector	2.7m	6.3m	8.6m	8.5m	7.7m	33.7m
Additional sectors	4.4m	10.4m	14.2m	14.0m	12.6m	55.5m
Rental expansion and the core rating engine	8.8m	20.8m	28.4m	27.9m	25.2m	111.1m
Flagship venues, investment and bulk trade	7.7m	18.2m	24.8m	24.4m	22.1m	97.2m
Total	125.5m	295.7m	403.3m	397.3m	358.5m	1.58bn

Advertising and media cost, all sectors, Years 1 to 5, in KES. Budgets are ceilings released by the chief commercial officer per category per quarter and reconciled against the rate card below.

Screentime - TV, digital display, out-of-home, cinema	Unit	Rate (KES)
National terrestrial TV, prime time, 30-second spot	per spot	450,000 - 800,000
National TV, off-peak, 30-second spot	per spot	150,000 - 350,000
Regional and vernacular TV, 30-second spot	per spot	40,000 - 120,000
Large-format billboard, Nairobi metro	per panel per month	250,000 - 650,000
County-town billboard	per panel per month	80,000 - 250,000
Digital out-of-home screen (mall and fuel-station networks)	per screen per month	35,000 - 120,000
Digital display and video	per 1,000 impressions	300 - 900
Cinema, 30-second spot	per screen per week	45,000 - 150,000

Airtime - radio, mobile, SMS, USSD, digital audio	Unit	Rate (KES)
National radio, prime time, 30-second spot	per spot	30,000 - 95,000
Vernacular radio, 30-second spot	per spot	8,000 - 35,000
Community radio, 30-second spot	per spot	2,500 - 12,000
Sponsored talk segment, 30 minutes	per segment	100,000 - 400,000
Bulk SMS	per 100,000 messages	45,000 - 120,000
USSD campaign	per session	1 - 3
Digital audio (streaming and podcast)	per 1,000 impressions	250 - 700

These are prevailing Kenyan market rates, used as the reference for procurement and media planning. Contract rates are negotiated against them.

6. The gap to target, and what would close it

The plan is measured against USD 12,000,000 a month, or KES 1,548,000,000 a month. At full maturity the model produces KES 468,002,500 a month, which is about USD 3.63 million a month. The shortfall of about KES 1,080,000,000 a month is structural rather than a ramp problem: all 87 lines are already at full ramp when it appears. So it cannot be closed by adding pipelines. It can only be closed by raising the scale factor or widening the market.

Monthly run-rate against the KES 1.548 billion target (USD 12m at KES 129)

Monthly run-rate against the target. The plan reaches roughly 30% of the target at full maturity on the base assumptions.

Improvement measure	Effect on Year 5 gross revenue
Base model - all 87 pipelines live from Year 1, scale factor 1.5	5,974,500,000
Base plus faster onboarding and tighter pricing on the four anchor categories	6,400,000,000 - 6,700,000,000
With the East African corridor roll-out lifting the scale factor to 2.0	7,966,000,000
With the corridor plus licensed lending and equity at scale	8,500,000,000 - 9,000,000,000
The stated target, for reference (USD 12,000,000 a month)	18,576,000,000

Four measures are proposed. **Onboarding speed:** pre-board the top 20 county governments with committed pavilion trade and collection volumes before launch, lifting the Year 1 ramp from 15% to 20% and Year 2 from 45% to 55%, worth an estimated KES 180-240 million cumulatively over Years 1 to 4; add a single-credential flow so that a verified seller on any pipeline is pre-approved on all the others; and reward cross-pipeline referrals through the trust score. **Pricing discipline:** hold the marketplace commission floor at 2.5% rather than 2.0% and price the tourism merchant-of-record bundle at a 25% blended commission rather than 20%, worth KES 150-200 million in Year 5 with no new buyers.

Regional roll-out: extend the marketplace and rental networks into Tanzania, Uganda and Rwanda along the Mombasa-Nairobi-Lake Victoria corridor, which lifts the scale factor from 1.5 to 2.0 and Year 5 gross revenue to roughly KES 7.97 billion, with the monthly run-rate rising to about KES 625 million. This is the single highest-lift measure in the programme. **Capital-market lines:** direct lending is the largest single lever once licensed; a book of KES 2 billion at a 6% net margin contributes KES 120 million a year and compounds as the book grows, but it is modelled as an option pending central bank approval rather than as committed revenue.

Year 5 gross revenue under the improvement programme (KES)

Year 5 gross revenue under each improvement scenario. Even with everything combined, the USD 12m monthly target is not reached inside five years at present steady-state estimates.

Even with all four measures running together the stated target is not reached within five years. It becomes feasible with the regional corridor and licensed lending succeeding in combination, and with a scale factor of 2.5 or higher beyond Year 5.

7. The fifteen lines to open first

Fifteen pipelines carry the largest share of full-maturity value, and they are the onboarding priority for Years 1 and 2. They are the lines where the shortest time from signing a seller to earning a fee.

The fifteen largest pipelines at full maturity. Together they are roughly half the catalog's value.

Rank	Pipeline	Category	Steady-state (KES/yr)	At 1.5 scale factor
1	General marketplace commission	Commerce, marketplace and discovery	300,000,000	450.0m
2	Wildlife and safari tourism	Tourism and hospitality	200,000,000	300.0m
3	Horticulture - cut flowers	Agriculture	150,000,000	225.0m
4	Gold	Minerals and natural resources	150,000,000	225.0m
5	Coastal and beach tourism	Tourism and hospitality	150,000,000	225.0m
6	Coffee	Agriculture	120,000,000	180.0m
7	Universal rental and lease placement network (all unit sizes, all towns)	Rental expansion and the core rating engine	120,000,000	180.0m
8	Horticulture - avocado	Agriculture	100,000,000	150.0m
9	Maize	Agriculture	90,000,000	135.0m
10	Residential sale	Real estate and property	90,000,000	135.0m
11	Livestock and dairy	Agriculture	80,000,000	120.0m
12	Horticulture - macadamia	Agriculture	70,000,000	105.0m
13	Residential rental	Real estate and property	70,000,000	105.0m
14	Short-let and Airbnb placement with experience cross-sell	Rental expansion and the core rating engine	70,000,000	105.0m
15	Tea	Agriculture	60,000,000	90.0m

8. Lines that cannot simply be switched on

Most of the catalog can run as soon as sellers and buyers are onboarded. A small number cannot, because they depend on a licence or an approval from someone outside the Corporation. The plan's own position is that these should be carried as options and not used to fund operations.

Revenue that depends on an approval KICC does not control. It is small enough that the plan does not rely on it, which is the point.

The gated lines are direct lending (62), which needs a central bank lending licence; the escrow float (59), which needs permission to retain interest on client money; and equity and investment facilitation

(85), where holding stakes may trigger a different licence from operating a marketplace. Water infrastructure (30) is not licence-gated but is slow to build by its nature. All four together are a small share of the catalog, which is why the plan treats them as upside rather than as the foundation.

9. What could go wrong

Risk	Why it matters here	What to do about it
Onboarding speed	All 87 lines open at once, so the model rests entirely on how fast sellers, buyers and investors join. A slower ramp compounds across every pipeline at the same time.	Reforecast quarterly against volume actually signed, never against volume expected.
Regulatory timing	Lending, equity facilitation and escrow float all need central bank or other approval that is outside the Corporation's control.	Carry them as options; do not fund operating costs against them.
Concentration	Four categories carry about 75% of Year 5 revenue.	Name an owner for each category and report category-level actuals monthly.
Estimate quality	The steady-state values come from the language of the catalog itself, not from sourced sector data.	Commission KNBS, the central bank and sector boards to validate before any fundraising use.
Advertising efficiency	The marketing ratio falls from 14% to 6% on the assumption that acquisition cost declines as the brand builds. If it does not, either spend rises or the ramp slows.	Track cost per verified seller and cost per transaction every month.

10. How the model is governed

The model is re-run every quarter against actuals, and the ramp assumptions change when the evidence changes. Advertising budgets are ceilings, released by the chief commercial officer by category and by quarter, and reconciled against the rate card. The net-revenue position, the shortfall against target and the category actuals go to the board monthly.

PART TWO

The 87 pipelines

Every line in the catalog, one at a time, in plain language. Each entry shows the same four things: what the line is, the flow from the supplier to the buyer, exactly how KICC earns from it, and what has to exist before it can run. The revenue figure shown on each line is the modelled full-maturity value from the workbook: the line's steady-state estimate multiplied by the 1.5 scale factor, with all pipelines mature. Figures are modelled estimates. Four lines are marked as enablers because they carry no fee of their own and are counted inside the lines they feed.

A. Agriculture

one line per crop, because each crop has a different buyer, price cycle and pooling problem.

15 lines · full-maturity revenue 1.47bn (25% of the catalog) · Year 5 advertising 88.2m

Agriculture - 15 pipelines, full-maturity revenue

Agriculture: the 15 lines in this category, and what each is worth a year at full maturity.

1 Coffee

Trade commission modelled at 180.0m a year at full maturity

KICC collects coffee from smallholder farmers who are not inside the co-operative system, checks the grade at the collection point, and sells the lot on to overseas roasters and importers. It also keeps the traceability records European buyers now demand.

WHO SUPPLIES

Smallholder coffee lots

WHAT KICC DOES

Grade at collection, pool and match

WHO PAYS / WHAT COMES OUT

Overseas roasters and importers

HOW KICC EARNS: 3-5% of export value

HOW KICC EARNS

A 3-5% commission on export value, plus a share of any advance paid against a signed contract.

BEFORE IT CAN RUN

Grading at collection, export buyer relationships, traceability records.

2 Tea

Trade commission modelled at 90.0m a year at full maturity

The same pooling idea, aimed only at independent and specialty tea growers that the Mombasa auction and KTDA do not already serve. KICC does not try to replace the auction.

HOW KICC EARNS

A 3-5% commission on the export volume it matches.

BEFORE IT CAN RUN

Buyer list outside the existing auction, quality checks for specialty and orthodox tea.

3 Maize

Trade commission modelled at 135.0m a year at full maturity

Moves maize from surplus counties to deficit counties so less grain is lost after harvest and prices are less volatile. Domestic trade, not export.

HOW KICC EARNS

A thin 1-2% commission on matched volume, plus a referral fee when storage is used.

BEFORE IT CAN RUN

County-level traders, storage links, reliable weighing at intake.

4 Sugarcane

Subscription modelled at 60.0m a year at full maturity

Farmers are already tied to factories, so this is not a trade line. KICC sells transparent weighing and grading data to millers and out-grower groups, to stop side-selling and quiet underpayment at the factory gate.

HOW KICC EARNS: Subscription or per-tonne fee

HOW KICC EARNS

A subscription or per-tonne verification fee - not a share of the crop value.

BEFORE IT CAN RUN

Miller agreements, integration with factory weighing systems.

5 Horticulture - cut flowers

Trade commission modelled at 225.0m a year at full maturity

Groups small and mid-size flower growers (outside the large Naivasha estates, which already export directly) and matches them to European and Middle Eastern buyers, with cold-chain and airfreight booking built into the deal.

HOW KICC EARNS: 3-5% export + logistics referral

HOW KICC EARNS

A 3-5% export commission, plus a referral fee on the logistics booking.

BEFORE IT CAN RUN

Cold chain, airfreight capacity, standing buyer contracts.

6 Horticulture - avocado

Trade commission modelled at 150.0m a year at full maturity

Pools smallholder avocado so the volume is big enough to fill an export container, and tracks the GlobalG.A.P. certification European supermarkets require.

HOW KICC EARNS

A 3-5% commission on export value.

BEFORE IT CAN RUN

Certification tracking, packhouse access, EU market requirements.

7 Horticulture - macadamia

Trade commission modelled at 105.0m a year at full maturity

The same smallholder pooling as avocado, but for a crop where the price depends heavily on grade, and where Asian demand is strong.

HOW KICC EARNS

A 3-5% export commission, plus a grading and quality-verification fee.

BEFORE IT CAN RUN

Grading laboratory, Asian buyer links.

8 Horticulture - French beans and vegetables

Trade commission modelled at 90.0m a year at full maturity

High-frequency, lower-value air-freighted vegetables for UK and EU supermarkets, with the residue and packaging standards those buyers audit.

HOW KICC EARNS

A 3-5% commission on export value.

BEFORE IT CAN RUN

Pesticide-residue testing, packaging compliance, airfreight slots.

9 Livestock and dairy

Trade commission modelled at 120.0m a year at full maturity

Cattle and goat sales at fair value instead of distress sales at the farm gate, plus milk volume and quality verification for dairy processors who need accurate numbers.

HOW KICC EARNS

A 1-3% commission on matched livestock sales, plus a milk-collection verification fee.

BEFORE IT CAN RUN

Auction yards and weighing, processor agreements.

10 Poultry

Trade commission modelled at 60.0m a year at full maturity

Links small broiler and egg producers to hotels, restaurants and retailers that buy in business volumes.

HOW KICC EARNS

A 2-4% marketplace commission on matched trade.

BEFORE IT CAN RUN

Business ordering tool, cold delivery to buyers.

11 Cotton

Trade commission modelled at 22.5m a year at full maturity

A revival-stage crop. KICC links the growers who remain to local textile and apparel factories, so garment plants can buy Kenyan cotton instead of imports.

HOW KICC EARNS

A commission on matched domestic supply contracts; strategically valuable even at low volume because it feeds the textile investment line.

BEFORE IT CAN RUN

Ginneries, contract farming, textile buyer commitment.

12 Fisheries and the blue economy

Trade commission modelled at 75.0m a year at full maturity

Fish trade from Lake Victoria, the coast and fish farms is largely informal and loses a lot to spoilage. KICC aggregates catch from landing sites into city and export markets with cold chain attached.

HOW KICC EARNS

A 2-4% commission on matched trade, plus a cold-chain referral fee.

BEFORE IT CAN RUN

Cold rooms at landing sites, refrigerated transport.

13 Aquaculture (fish farming)

Trade commission modelled at 37.5m a year at full maturity

A separate, government-promoted sector from wild catch: fragmented fish farmers who need both a buyer and financing for feed and fingerlings.

HOW KICC EARNS

Marketplace commission on matched trade, plus an input-financing referral fee.

BEFORE IT CAN RUN

Feed and fingerling partners, pond-side collection.

14 Forestry and timber

Trade commission modelled at 52.5m a year at full maturity

Verified legal timber trade. Illegal logging and chain-of-custody problems are real, so a platform that can prove where timber came from has something to sell.

HOW KICC EARNS

A 2-4% transaction commission, plus a provenance-verification fee paid by buyers who need proof of legal sourcing.

BEFORE IT CAN RUN

Licensed sawmillers, provenance and custody records.

15 Edible oils (sunflower and oilseeds)

Trade commission modelled at 67.5m a year at full maturity

Kenya imports a large share of its cooking oil. KICC aggregates local oilseed for domestic processors to replace some of that import.

HOW KICC EARNS

A commission on matched grower-to-processor supply contracts.

BEFORE IT CAN RUN

Oilseed buyers and processors, quality testing.

B. Minerals and natural resources

mostly matchmaking, because the big deposits already have operators.

6 lines · full-maturity revenue 424.5m (7% of the catalog) · Year 5 advertising 25.5m

Minerals and natural resources: the 6 lines in this category, and what each is worth a year at full maturity.

16

Soda ash

Investment matchmaking

modelled at 15.0m a year at full maturity

Lake Magadi is globally significant and already has an established operator, so there is nothing to aggregate. KICC's role is matching investors or offtake buyers for expansion capacity and adjacent mineral rights.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Lake Magadi resource and licence holders

Match investors and offtake for expansion

Investors and industrial offtakers

HOW KICC EARNS: Facilitation fee on matched deals

HOW KICC EARNS

BEFORE IT CAN RUN

A facilitation fee on any matched investment or offtake introduction.

Mineral and infrastructure data, investor pipeline.

17 Titanium and mineral sands

Investment matchmaking modelled at 22.5m a year at full maturity

Kwale County deposits, also already operated. Same role as soda ash: match investment or offtake for adjacent blocks, and show investors what sits near the resource (labour, power, port access).

HOW KICC EARNS

A success fee of 0.1-0.5% of matched investment value.

BEFORE IT CAN RUN

County resource data, investor matching engine.

18 Gold

Trade commission modelled at 225.0m a year at full maturity

Artisanal and small-scale gold mining in western Kenya is large, fragmented and mostly undocumented. KICC buys and sells only verified, licensed production, which tackles both smuggling losses and the low prices miners are paid.

HOW KICC EARNS

A 3-5% commission on verified trade volume - a wider margin than most agriculture lines because the current exploitation of miners is severe.

BEFORE IT CAN RUN

Licensed small-scale operators, assay and weighing, compliant buyers.

19 Gemstones (tsavorite, ruby and other coloured stones)

Trade commission modelled at 60.0m a year at full maturity

Kenyan coloured gemstones are mined at small scale and often sold cheaply because miners have no grading expertise and no access to jewellery buyers. KICC brings grading and international market access.

HOW KICC EARNS: 5-10% plus certification fee

HOW KICC EARNS

A 5-10% commission (higher than bulk commodities, because unit values are high and miner price realisation is currently very low), plus a certification fee.

BEFORE IT CAN RUN

Certification partner, international jewellery-trade buyers.

20 Limestone, sand and quarry aggregates

Trade commission modelled at 90.0m a year at full maturity

Construction inputs: high volume, low unit value, and transport cost dominates - so this is a hyper-local matching problem, nearest quarry to nearest building site.

HOW KICC EARNS: 1-2%, very high frequency

HOW KICC EARNS

A thin 1-2% commission, but very high transaction frequency; it plugs straight into the construction and real-estate lines.

BEFORE IT CAN RUN

Quarry and site listings, haulage partners.

21 Fluorspar, coal and other exploration-stage minerals

Investment matchmaking modelled at 12.0m a year at full maturity

Early-stage or underdeveloped deposits (Kitui coal and similar). Nothing is being mined at scale, so there is no trade to commission. KICC sells resource and infrastructure data to prospective investors, licence holders and joint-venture partners.

HOW KICC EARNS: Data and matchmaking fee

HOW KICC EARNS

A data and matchmaking fee only.

BEFORE IT CAN RUN

County resource mapping, licence-holder relationships.

C. Industrial, manufacturing and the special economic zones

investment matchmaking plus recurring compliance and staffing services.

5 lines · full-maturity revenue 210.0m (4% of the catalog) · Year 5 advertising 12.6m

Industrial, manufacturing and the special economic zones: the 5 lines in this category, and what each is worth a year at full maturity.

22

Textiles and apparel manufacturing investment

Investment matchmaking

modelled at 30.0m a year at full maturity

Matches investors into SEZ-designated garment and textile factories - a real, current Kenyan export industry, AGOA-linked.

WHO SUPPLIES

SEZ garment factory opportunities

→

WHAT KICC DOES

Match investors into designated capacity

→

WHO PAYS / WHAT COMES OUT

Apparel investors and buyers

HOW KICC EARNS: 0.1-0.5% success fee

HOW KICC EARNS

A 0.1-0.5% success fee on matched investment, plus workforce-matching fees once the factory is running.

BEFORE IT CAN RUN

SEZ inventory, investor pipeline, labour pool.

23 General industrial and SEZ investment matchmaking

Investment matchmaking modelled at 90.0m a year at full maturity

The parent line for any manufacturing investor not named elsewhere: fertiliser, cement, agro-processing, electronics and vehicle assembly.

HOW KICC EARNS

A 0.1-0.5% success fee on committed investment.

BEFORE IT CAN RUN

Investor pipeline, zone and site data, sector briefs.

24 Leather and footwear manufacturing

Investment matchmaking modelled at 22.5m a year at full maturity

Kenya's hides and skins are mostly exported raw or semi-processed. This line ties the livestock pipeline's supply to local tanning and finished-goods capacity.

HOW KICC EARNS

A success fee on matched investment, plus an ongoing input-supply commission linking hides producers to tanneries and factories.

BEFORE IT CAN RUN

Tannery partners, hides supply agreements.

25 Compliance-as-a-service (SEZ enterprises)

Subscription modelled at 37.5m a year at full maturity

A recurring subscription that handles KRA and customs record-keeping for manufacturers inside special economic zones, under the 2026 Economic Zones Bill.

HOW KICC EARNS

A monthly or annual subscription per enterprise, earned whether or not the client trades that month.

BEFORE IT CAN RUN

Tax and customs rule mapping, filing workflow.

26 Workforce-matching-as-a-service

Subscription modelled at 30.0m a year at full maturity

Connects verified, skills-tagged people (an extension of the identity and business-verification registry) to SEZ and manufacturing employers.

HOW KICC EARNS

A fee per successful hire, or an employer subscription to the labour pool.

BEFORE IT CAN RUN

Skills tagging, employer agreements, verification data.

D. Energy and infrastructure investment

long-horizon matchmaking; slow to build, directly serves the equity mandate.

4 lines · full-maturity revenue 127.5m (2% of the catalog) · Year 5 advertising 7.7m

Energy and infrastructure investment: the 4 lines in this category, and what each is worth a year at full maturity.

27

Geothermal investment matchmaking

Investment matchmaking

modelled at 37.5m a year at full maturity

Kenya is a globally significant geothermal producer (Olkaria) with room for more private generation capacity. KICC matches private capital to projects.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Geothermal generation projects

Match private capital to projects

Private power investors

HOW KICC EARNS: Matchmaking success fee

HOW KICC EARNS

BEFORE IT CAN RUN

A matchmaking success fee on committed investment.

Project pipeline, investor relationships, power-sector data.

28 Solar (utility-scale and off-grid)

Investment matchmaking modelled at 52.5m a year at full maturity

Two things in one line: match investment into utility-scale solar, and run a distribution and financing role for off-grid household and business solar in underserved counties - exactly the infrastructure the lowest-tier counties need.

HOW KICC EARNS: Matchmaking fee + distribution fee

HOW KICC EARNS

A matchmaking fee on utility-scale deals; a commission or financing-referral fee on off-grid distribution.

BEFORE IT CAN RUN

Off-grid distributors, finance partners, county classification data.

29 Wind power investment matchmaking

Investment matchmaking modelled at 22.5m a year at full maturity

Same mechanism as geothermal and solar. Kenya already runs utility-scale wind (Lake Turkana) and has further sites.

HOW KICC EARNS: Matchmaking success fee

HOW KICC EARNS

A matchmaking success fee on committed investment.

BEFORE IT CAN RUN

Site data, investor pipeline.

30 Water infrastructure and bulk water services

Investment matchmaking modelled at 15.0m a year at full maturity

Match investment into water infrastructure in the lowest-tier counties, and in the longer term facilitate bulk water trade between counties with surplus and counties with deficit. Slow to build, but it directly serves the equity mandate.

HOW KICC EARNS: Matchmaking fee, then commission

HOW KICC EARNS

A matchmaking fee first; a trade-facilitation commission once bulk water trading is operational.

BEFORE IT CAN RUN

County water data, infrastructure partners.

E. Real estate and property

commission on verified property transactions, split by segment.

6 lines · full-maturity revenue 457.5m (8% of the catalog) · Year 5 advertising 27.4m

Real estate and property: the 6 lines in this category, and what each is worth a year at full maturity.

31

Residential sale

Trade commission

modelled at 135.0m a year at full maturity

Sale of titled homes, with title verified through Ardhisasa and conveyancing handled by an advocate on the platform.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Titled homes for sale

Verify title, run the conveyancing

Home buyers

HOW KICC EARNS: 1-3% of sale value

HOW KICC EARNS

BEFORE IT CAN RUN

A 1-3% success fee on sale value - the standard Kenyan agency range.

Ardhisasa title checks, advocate network, valuation.

32 Residential rental

Trade commission modelled at 105.0m a year at full maturity

Long-lease letting. Shorter cycle than a sale, recurring renewal revenue, and a lower verification bar because tenancy, not ownership, changes hands.

HOW KICC EARNS

A one-off placement fee (typically about one month's rent), plus a smaller recurring management fee where KICC also handles rent collection or escrow.

BEFORE IT CAN RUN

Landlord and tenant onboarding, tenancy agreements, payment handling.

33 Commercial and office space

Trade commission modelled at 90.0m a year at full maturity

Office leasing and sale. Office buildings are exactly the inventory the building-level directory layer captures, so this line sits on top of it.

HOW KICC EARNS

A leasing commission, higher per transaction than residential.

BEFORE IT CAN RUN

Building-level listings, corporate tenants.

34 Industrial and warehousing space

Trade commission modelled at 60.0m a year at full maturity

A distinct market from offices and homes, serving the logistics and manufacturing lines directly - a business in those pipelines needs exactly this space.

HOW KICC EARNS

A leasing commission, plus cross-sell into the warehousing service line.

BEFORE IT CAN RUN

Warehouse and industrial listings, industrial tenants.

35 Agricultural land banking and land trading

Trade commission modelled at 45.0m a year at full maturity

Sale and lease of agricultural land, separate from developed property. Same title rigour, different buyer - often a diaspora or institutional agricultural investor.

HOW KICC EARNS

A commission on sale or lease value.

BEFORE IT CAN RUN

Title verification, diaspora and institutional buyer channel.

36 Title insurance

Referral or embedded distribution modelled at 22.5m a year at full maturity

A real product gap, given how central title risk already is to the property lines: buyers can insure against a title failing after purchase.

HOW KICC EARNS

A 10-20% commission on the premium, sold at the same moment as conveyancing.

BEFORE IT CAN RUN

Insurer partner, embedding at the conveyancing step.

F. Tourism and hospitality

bundled trips and ticketing, split by the type of traveller.

7 lines · full-maturity revenue 787.5m (13% of the catalog) · Year 5 advertising 47.2m

Tourism and hospitality: the 7 lines in this category, and what each is worth a year at full maturity.

38 Coastal and beach tourism

Bundled experience modelled at 225.0m a year at full maturity

Mombasa, Diani and Watamu. A different buyer intent from safari, with different seasons and different competitors, so it is packaged separately.

HOW KICC EARNS

The same bundled merchant-of-record commission.

BEFORE IT CAN RUN

Coast hotel contracts, transfers, seasonality pricing.

39 Cultural and heritage tourism

Booking or ticketing modelled at 60.0m a year at full maturity

Fort Jesus and similar heritage sites. Lower spend per visitor than safari or beach, but high volume, and it serves the goal of bringing visitors to places that are currently under-visited.

HOW KICC EARNS

A ticketing commission, plus bundling into multi-stop itineraries with other categories.

BEFORE IT CAN RUN

Site agreements, ticket infrastructure, itinerary bundling.

40 MICE (conference and exhibition) tourism

Bundled experience modelled at 90.0m a year at full maturity

A natural cross-sell. Someone attending an exhibition KICC is already hosting also needs a hotel and transport, and the platform knows the event is happening.

HOW KICC EARNS

A booking commission on the accommodation and transport wrapped around the event.

BEFORE IT CAN RUN

Hotel and transport partners, event calendar integration.

41 Adventure and mountain tourism

Bundled experience modelled at 37.5m a year at full maturity

Mount Kenya climbs, trekking and whitewater - a smaller but growing niche served by specialist operators.

HOW KICC EARNS

The same bundled commission, packaged for this buyer.

BEFORE IT CAN RUN

Specialist operator contracts, safety standards.

42 Diaspora 'come home' tourism

Bundled experience modelled at 75.0m a year at full maturity

Holiday-timed packages marketed to Kenyans abroad through SACCOs and church networks. These buyers arrive with intent and spend more than a cold international tourist.

HOW KICC EARNS

The same tourism commission, but priced in US dollars.

BEFORE IT CAN RUN

USD pricing, remote identity verification, diaspora channels.

43 Diaspora investment gateway (property, SEZ, agricultural land)

Enabler - carries no direct fee no direct fee — counted inside the lines it feeds

Not tourism, but it shares the same buyer: a Kenyan abroad with dollars and no trusted channel at home. It applies remote verification and dollar transactions across the property, SEZ and agricultural land lines.

HOW KICC EARNS: No new fee - feeds existing lines

HOW KICC EARNS

No new charge of its own - it captures the commissions already specified for property, industrial and land pipelines, from a buyer segment currently worth an estimated USD 1 billion a year in remittances seeking a productive home.

BEFORE IT CAN RUN

Remote KYC, USD settlement, trusted local partners.

G. Commerce, marketplace and discovery

the trade engine plus the visibility and event layers around it.

10 lines · full-maturity revenue 810.0m (14% of the catalog) · Year 5 advertising 48.6m

Commerce, marketplace and discovery: the 10 lines in this category, and what each is worth a year at full maturity.

44

General marketplace commission

Trade commission

modelled at 450.0m a year at full maturity

Everyday domestic goods trade on the core marketplace - the baseline charge on any transaction not already covered by a product-specific line above.

WHO SUPPLIES

Domestic sellers of everyday goods

→

WHAT KICC DOES

Hold payment, release on delivery

→

WHO PAYS / WHAT COMES OUT

Domestic buyers

HOW KICC EARNS: 2-5% escrow commission

HOW KICC EARNS

A 2-5% escrow commission on transaction value.

BEFORE IT CAN RUN

Escrow rails, seller verification, dispute handling.

45 Exhibitor subscriptions

Subscription modelled at 60.0m a year at full maturity

A flat monthly fee for a presence on the marketplace, paid whether or not the exhibitor trades that month.

WHO SUPPLIES

Businesses wanting a marketplace presence

WHAT KICC DOES

Provide storefront and listing

WHO PAYS / WHAT COMES OUT

Exhibitors (subscribers)

HOW KICC EARNS: KES 500 / 2,500 / 10,000 a month

HOW KICC EARNS

Fixed monthly tiers of KES 500 / 2,500 / 10,000.

BEFORE IT CAN RUN

Listing and storefront tooling, billing.

46 Embedded insurance distribution

Referral or embedded distribution modelled at 75.0m a year at full maturity

An optional insurance step added at checkout across every line that has an insurance moment: goods in transit, crop and weather cover, travel, event liability, title.

WHO SUPPLIES

Insurance moments at checkout

WHAT KICC DOES

Offer cover at the point of sale

WHO PAYS / WHAT COMES OUT

Buyers; an insurer carries the risk

HOW KICC EARNS: 10-20% of the premium

HOW KICC EARNS

A 10-20% commission on the premium.

BEFORE IT CAN RUN

Insurer partners, checkout integration, simple product wording.

47 County-pavilion trade

Trade commission modelled at 30.0m a year at full maturity

Marketplace trade organised under a county's own branded pavilion. Same underlying commission as general marketplace trade, but the revenue is attributed to the county under the onboarding agreement rather than fully retained.

WHO SUPPLIES

County-branded traders

WHAT KICC DOES

Organise the trade and attribute revenue

WHO PAYS / WHAT COMES OUT

Buyers; the county shares revenue

HOW KICC EARNS: Commission, split with the county

HOW KICC EARNS

A commission on pavilion trade, split with the county.

BEFORE IT CAN RUN

County onboarding agreements, pavilion branding.

48 Exhibition booths and physical event tickets

Booking or ticketing modelled at 37.5m a year at full maturity

Booking fees on physical exhibition space and ticket sales for events KICC hosts, with prices moving within fixed floors and ceilings.

HOW KICC EARNS

A booking fee on space, plus a share of ticket sales.

BEFORE IT CAN RUN

Venue grid, dynamic pricing rules, ticketing.

49 Advertising and digital-screen inventory

Advertising and visibility modelled at 90.0m a year at full maturity

Featured placement, county co-marketing packages, click-out fees and physical screen advertising, sold as yield-managed inventory rather than flat rate cards.

HOW KICC EARNS

Advertising revenue from sellers and counties buying visibility - never allowed to outrank an earned rating.

BEFORE IT CAN RUN

Inventory management, audience data, fairness floor rules.

50 Livestream viewer passes

Booking or ticketing modelled at 15.0m a year at full maturity

Single-event and all-access annual passes for livestreamed exhibitions and events, with the system spotting the moment a free viewer is ready to convert.

HOW KICC EARNS

Pass sales and in-stream upgrades.

BEFORE IT CAN RUN

Streaming infrastructure, payment for passes.

51 Building and property directory listings (discovery layer)

Advertising and visibility modelled at 22.5m a year at full maturity

Free building and tenant listings with paid visibility tiers on top. The foundational supply-side layer, monetised mainly through what it feeds rather than by subscription alone.

HOW KICC EARNS

Paid visibility tiers; its real value is the inventory it supplies to marketplace trade and venue booking.

BEFORE IT CAN RUN

Building-level data collection, listing tooling, verification.

52 Meeting room and venue booking

Booking or ticketing modelled at 30.0m a year at full maturity

The first directly bookable, commission-earning inventory in the directory: meeting rooms and event space in hotels, office blocks, church halls and county social halls, currently not aggregated anywhere.

HOW KICC EARNS

A booking commission on each confirmed booking.

BEFORE IT CAN RUN

Owner agreements, availability calendar, booking flow.

53 National government portal contracts

Enabler - carries no direct fee no direct fee — counted inside the lines it feeds

Not a commission line at all. It is a lead-scoring feature that ranks which ministries and agencies are engaging, so the sales team knows where to spend its time.

HOW KICC EARNS

No direct revenue - it is monetised through whatever contract the sales team closes.

BEFORE IT CAN RUN

Engagement tracking, sales team workflow.

H. Logistics and trade

fees on moving goods, storing them and clearing them.

4 lines · full-maturity revenue 217.5m (4% of the catalog) · Year 5 advertising 13.1m

Logistics and trade: the 4 lines in this category, and what each is worth a year at full maturity.

54 Cross-border e-commerce logistics

Trade commission modelled at 75.0m a year at full maturity

An overseas buyer (China, Russia, US, UK) ordering a Kenyan item: KICC handles the multi-carrier routing and shows the landed cost, including customs, at checkout.

HOW KICC EARNS

A commission plus a currency spread.

BEFORE IT CAN RUN

Carrier integrations, customs and duty calculation.

55 Freight and warehousing-as-a-service

Booking or ticketing modelled at 60.0m a year at full maturity

Aggregates warehouse capacity (feeding from the industrial space line) and sells it as bookable storage and fulfilment to marketplace sellers - most useful for maize and for horticulture cold chain.

HOW KICC EARNS

A booking and storage fee, separate from the property leasing commission on the same building.

BEFORE IT CAN RUN

Warehouse onboarding, inventory and booking system.

56 Customs facilitation and documentation

Booking or ticketing modelled at 30.0m a year at full maturity

A service layer that helps exporters of coffee, tea, horticulture and minerals get customs declarations and certificates of origin right.

HOW KICC EARNS

A per-shipment fee, charged independently of the trade commission.

BEFORE IT CAN RUN

Customs expertise, document templates, broker network.

57 Cold-chain logistics for perishables

Booking or ticketing modelled at 52.5m a year at full maturity

A specialised transport and storage layer for horticulture, fisheries and dairy. Perishables lose value far faster to delay than any other cargo, which is why this is its own line rather than generic freight.

HOW KICC EARNS

A booking commission on cold-chain capacity.

BEFORE IT CAN RUN

Reefer capacity, temperature monitoring, cold stores.

I. Financial services and capital

from referral and data products up to licensed lending.

7 lines · full-maturity revenue 345.0m (6% of the catalog) · Year 5 advertising 20.7m

Financial services and capital: the 7 lines in this category, and what each is worth a year at full maturity.

58

Escrow commission (base rate)

Trade commission

modelled at 60.0m a year at full maturity

The payment-hold-release charge that sits under most trade lines. Listed separately because it is a distinct mechanism from the matching and aggregation work each product line does.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Buyers paying for goods

→

Hold funds, release on delivery

→

Sellers paid on completion

HOW KICC EARNS: 2-5% escrow commission

HOW KICC EARNS

BEFORE IT CAN RUN

A 2-5% commission on transactions that settle through escrow.

Escrow accounts, banking partner, release rules.

59 Escrow float and treasury yield

Treasury float modelled at 30.0m a year at full maturity

While buyer money is held before release, it sits in an account. This line is the interest spread earned on those aggregate balances.

HOW KICC EARNS

Interest earned on held balances - pending confirmed central bank permission to retain it.

BEFORE IT CAN RUN

Central bank approval, treasury policy, ring-fenced accounting.

60 Credit data as a service

Data or API licensing modelled at 45.0m a year at full maturity

Licences anonymised, aggregated trust scores and verified transaction history to banks and fintechs as an input to their lending decisions. No lending licence needed to sell it.

HOW KICC EARNS

A subscription or per-query fee.

BEFORE IT CAN RUN

Data-consent framework, aggregation, bank agreements.

61 Loan referral marketplace

Referral or embedded distribution modelled at 37.5m a year at full maturity

A second layer on top of the credit data line: referring businesses on the platform to partner lenders once the data product has proven it works.

HOW KICC EARNS

A 1-3% finder's fee on the value of loans originated.

BEFORE IT CAN RUN

Lender panel, referral tracking.

62 Direct lending (licence-gated)

Lending and financing modelled at 90.0m a year at full maturity

Originating and servicing loans against confirmed exposure - a purchase order or an agricultural export contract. The largest financial line by ceiling, and entirely gated on a central bank lending licence.

HOW KICC EARNS: Net interest margin (licence-gated)

HOW KICC EARNS

Net interest margin on the loan book (a KES 2 billion book at a 6% net margin is KES 120 million a year, compounding as the book grows).

BEFORE IT CAN RUN

Central bank lending licence, credit policy, capital.

63 Input financing

Lending and financing modelled at 52.5m a year at full maturity

Advances against the next harvest, for seed, fertiliser and feed, recovered at the point of sale. A different product from general lending because the collateral is a future crop, not a fixed asset.

HOW KICC EARNS: Finance margin at harvest

HOW KICC EARNS

Interest or a finance margin recovered on the harvest sale.

BEFORE IT CAN RUN

Recovery mechanism at sale, agri input suppliers, credit policy.

64 KYB-as-a-service / verification API

Data or API licensing modelled at 30.0m a year at full maturity

Resells the platform's own business-verification infrastructure - tax PIN validation, document checks, trust scoring - to banks, insurers and other platforms that need to verify a Kenyan business.

HOW KICC EARNS

A per-query or subscription API fee, built on infrastructure the platform needs anyway for its own onboarding.

BEFORE IT CAN RUN

API product, uptime, data-provider agreements.

J. Government and public sector

facilitation of county and national flows, deliberately low-margin.

3 lines · full-maturity revenue 127.5m (2% of the catalog) · Year 5 advertising 7.7m

Government and public sector: the 3 lines in this category, and what each is worth a year at full maturity.

65 County government subscriptions

Subscription modelled at 22.5m a year at full maturity

Flat monthly fee for county access to the portal, in tiers from KES 10,000 to KES 500,000. Deliberately capped: this is about access and legitimacy, not about being a revenue driver.

HOW KICC EARNS BEFORE IT CAN RUN

A capped monthly subscription per county. County onboarding, portal access, tiering rules.

66 County own-source revenue collection

Trade commission modelled at 60.0m a year at full maturity

Helps counties collect parking, permits, cess and market fees that currently leak through cash handling, by putting them on a tracked rail.

HOW KICC EARNS BEFORE IT CAN RUN

A 1.5-2% facilitation fee on the revenue actually collected. County finance integration, digital collection, reconciliation.

67 Procurement rail facilitation

Trade commission modelled at 45.0m a year at full maturity

Sits on matched county and national government procurement flows, aligned to the stages of the government procurement system.

HOW KICC EARNS

A 0.5-1% facilitation fee on matched procurement value.

BEFORE IT CAN RUN

Procurement stage mapping, supplier verification.

K. Additional sectors

eight brainstormed lines with real demand but no prior build.

8 lines · full-maturity revenue 210.0m (4% of the catalog) · Year 5 advertising 12.6m

Additional sectors: the 8 lines in this category, and what each is worth a year at full maturity.

68

Education and skills certification marketplace

Referral or embedded distribution

modelled at 30.0m a year at full maturity

Matches training providers (vocational, technical, university-adjacent) to learners, with a credential layer that feeds the workforce-matching line - a verified certificate is worth more to an employer than an unverified one.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Training providers

Match learners and verify credentials

Learners; employers verify

HOW KICC EARNS: Referral plus verification fee

HOW KICC EARNS

BEFORE IT CAN RUN

A referral fee from training providers, plus a fee from employers verifying a candidate's credential.

Provider agreements, credential verification, learner demand.

69 Health facility directory and appointment booking

Booking or ticketing modelled at 22.5m a year at full maturity

Directory and booking for clinics and hospitals, starting with the facilities in the lowest-tier counties - which gives those counties a real service rather than a subsidised listing - and moving to a booking commission model in better-served areas.

HOW KICC EARNS: Booking commission; free in low-tier counties

HOW KICC EARNS

A booking or referral commission in commercially viable areas; free or subsidised listing in the lowest-tier counties as part of the equity mandate.

BEFORE IT CAN RUN

Facility data, booking integration, county tiering.

70 Telemedicine referral

Referral or embedded distribution modelled at 15.0m a year at full maturity

A thin referral layer connecting patients to licensed telemedicine providers, most valuable in counties with few doctors per person.

HOW KICC EARNS: Referral per consultation

HOW KICC EARNS

A referral fee per consultation booked, paid by the provider.

BEFORE IT CAN RUN

Licensed provider panel, patient consent.

71 Creative industries - event ticketing and rights marketplace

Booking or ticketing modelled at 30.0m a year at full maturity

Ticketing for concerts, film screenings and cultural events beyond the exhibition line, plus a rights marketplace connecting Kenyan musicians and filmmakers to distributors.

HOW KICC EARNS

A ticketing commission, plus a rights-deal facilitation fee.

BEFORE IT CAN RUN

Organiser agreements, ticketing, rights contracting.

72 Sports facility booking and sports tourism

Booking or ticketing modelled at 22.5m a year at full maturity

Booking commission on stadium, pitch and court hire - the same underused-capacity problem as meeting rooms - plus packaged sports-tourism trips, using Kenya's distance-running reputation.

HOW KICC EARNS

A booking commission on facility hire, plus the standard bundled commission on sports-tourism itineraries.

BEFORE IT CAN RUN

Facility agreements, sports event partners.

73 ICT and business-process outsourcing facilitation

Investment matchmaking modelled at 37.5m a year at full maturity

Investor and site matchmaking for Kenya's established outsourcing and tech-services sector, plus a verified pool of digital-skills workers.

HOW KICC EARNS

A matchmaking success fee, plus workforce-matching fees.

BEFORE IT CAN RUN

Site data, BPO investor pipeline, skills pool.

74 Waste management and recycling marketplace

Trade commission modelled at 22.5m a year at full maturity

Matches waste generators (municipal, industrial, commercial) to licensed recyclers and processors. Extended producer-responsibility rules are creating new compliance demand.

HOW KICC EARNS

A transaction commission, plus a compliance-verification fee sold to producers who need proof of proper disposal.

BEFORE IT CAN RUN

Licensed recycler base, compliance records, haulage.

75 Professional services marketplace

Referral or embedded distribution modelled at 30.0m a year at full maturity

Verified architects, contractors, quantity surveyors, lawyers and accountants. Every transaction in the property and industrial lines creates demand for exactly these people.

HOW KICC EARNS

A referral or lead-generation fee, or a subscription for professionals wanting directory visibility.

BEFORE IT CAN RUN

Professional verification, directory, lead routing.

L. Rental expansion and the core rating engine

the letting network, premium rental, and the one engine that rates everything.

5 lines · full-maturity revenue 420.0m (7% of the catalog) · Year 5 advertising 25.2m

Rental expansion and the core rating engine: the 5 lines in this category, and what each is worth a year at full maturity.

76

Universal rental and lease placement network (all unit sizes, all towns)

Trade commission

modelled at 180.0m a year at full maturity

The core letting middleman, made explicit: any landlord with any unit - a bedsitter in Kisumu, a two-bedroom in Eldoret, a four-bedroom in Nairobi - lists through KICC, and when a tenant signs after being connected through the platform, KICC earns a placement fee. The whole value of the network is that it works the same way in a secondary town as in the capital.

WHO SUPPLIES

Any landlord, any unit, any town

→

WHAT KICC DOES

Place tenants and paper the lease

→

WHO PAYS / WHAT COMES OUT

Tenants nationwide

HOW KICC EARNS:

Placement fee at lease signing

HOW KICC EARNS

A placement fee at lease signing, typically a percentage of one month's or one year's rent, earned once per successful placement, with no cap on unit size or location.

BEFORE IT CAN RUN

Landlord onboarding at scale, tenancy documentation, town-by-town coverage.

77 Short-let and Airbnb placement with experience cross-sell

Bundled experience modelled at 105.0m a year at full maturity

Short stays are a different segment from long leases because the booking itself triggers a second sale: the platform knows the guest's dates and location, which is exactly what is needed to offer a relevant paid experience timed to the stay.

HOW KICC EARNS: Booking plus tourism commission

HOW KICC EARNS

A booking commission on the short-let itself, plus the tourism commission on whatever the guest adds - the short-let becomes an entry point into the tourism stack.

BEFORE IT CAN RUN

Short-let inventory, itinerary engine, experience partners.

78 Villas and mansionettes - premium rental commission

Trade commission modelled at 60.0m a year at full maturity

High-end rental as its own line because the buyer, the price and the service expectation differ from standard letting: usually a corporate relocation, a returnee or a high-net-worth tenant who expects a higher-touch process.

HOW KICC EARNS: Above the standard placement rate

HOW KICC EARNS

A commission above the standard placement rate, reflecting both the higher rent and the extra verification and concierge work.

BEFORE IT CAN RUN

Premium inventory, concierge and verification capacity.

79 Universal multi-agency rating engine

Enabler - carries no direct fee no direct fee — counted inside the lines it feeds

Not a property feature and not a product in itself: one rating engine at the core of the platform that every line plugs into when it lists a person, business, property, venue or site. It combines platform history (reviews, transaction and dispute records) with verified government data from several ministries, weighting a different subset for each type of thing being rated.

HOW KICC EARNS: No direct fee - enables visibility sales

HOW KICC EARNS

No separate charge. It is the trust infrastructure that makes every paid-visibility line in the catalog sellable at all, and building it once keeps ratings consistent and the fairness rule enforceable in one place.

BEFORE IT CAN RUN

Cross-ministry data agreements, one scoring engine, a published fairness rule.

80 Commercial space connection facilitation (shops, venues, conference space)

Booking or ticketing modelled at 75.0m a year at full maturity

Generalises meeting-room booking and commercial leasing into an ongoing connection service across the whole building network: any building offering shop space, event venues or conference areas earns KICC a commission when a business or organiser is connected to it.

HOW KICC EARNS: Booking or leasing commission

HOW KICC EARNS

A booking commission for short-term and event use, and a leasing commission for longer-term shop or office space - the same building can generate both, at different times, from different tenants.

BEFORE IT CAN RUN

Whole-building inventory, owner agreements, booking and lease tooling.

M. Flagship venues, investment and bulk trade

large venues, universal ticketing, equity, multi-zone SEZ and wholesale matching.

7 lines · full-maturity revenue 367.5m (6% of the catalog) · Year 5 advertising 22.1m

Flagship venues, investment and bulk trade: the 7 lines in this category, and what each is worth a year at full maturity.

81

Hotel-partner bundled conference and leisure experience

Bundled experience

modelled at 45.0m a year at full maturity

A named extension of conference tourism: a company books a conference at a partner hotel, and at booking time the platform offers the whole trip around it - accommodation at the venue, a beach or leisure component, dining, and a second destination arranged with the hotel partner.

WHO SUPPLIES

WHAT KICC DOES

WHO PAYS / WHAT COMES OUT

Partner hotels and conference space

Wrap leisure and dining around the event

Corporate and conference clients

HOW KICC EARNS: Blended tourism commission stack

HOW KICC EARNS

BEFORE IT CAN RUN

The same blended tourism commission stack (flights, transfers, accommodation, experiences, plus a curated-package markup), applied to corporate and conference travel, which is higher-value and less price-sensitive than leisure.

Hotel partner agreements, conference inventory, itinerary packaging.

82 Airline and travel-partner MOU network

Enabler - carries no direct fee no direct fee — counted inside the lines it feeds

Formal agreements with airlines and other travel partners that let the platform include flights directly, even at short notice - so an urgent business trip can be booked as one itinerary instead of being assembled piece by piece. This is infrastructure, not a customer-facing product.

HOW KICC EARNS

An affiliate or commission arrangement with each airline partner, captured inside the bundled trip commission rather than billed separately.

BEFORE IT CAN RUN

Airline agreements, fare access, itinerary integration.

83 Flagship venue and stadium booking (Kasarani, Nyayo, Sarit Expo, KICC, Bomas)

Booking or ticketing modelled at 52.5m a year at full maturity

Separate from generic building space because these are large, often state-owned venues with booking dynamics that do not resemble a church hall: concerts, national ceremonies, large expos and international conferences, often booked months ahead with security, crowd management and broadcast rights layered on top.

HOW KICC EARNS

A facilitation or booking commission on the venue-hire value, higher per transaction than the generic space line, plus referral fees on the separate security, catering and audio-visual contracts.

BEFORE IT CAN RUN

Venue authority agreements, event logistics, ancillary supplier network.

84 Universal site and attraction visit ticketing

Booking or ticketing modelled at 37.5m a year at full maturity

Extends ticketing past the named tourism categories to any paid site visit through the platform: a factory tour for an SEZ investor doing due diligence, a government facility visit, a hotel-arranged excursion, or any attraction not otherwise captured.

HOW KICC EARNS: 10-20% ticketing commission

HOW KICC EARNS

A ticketing commission, typically 10-20%, consistent with existing attraction ticketing, extended to business and institutional visits as well as leisure.

BEFORE IT CAN RUN

Site agreements, ticketing rails, broad attraction inventory.

85 Equity and investment facilitation

Equity and capital modelled at 75.0m a year at full maturity

Separate from lending and from credit data. Two mechanisms that can run independently: KICC's own investment arm takes minority stakes in high-performing platform businesses identified through their verified trust and transaction history; and KICC matches businesses seeking capital to third-party investors (angel networks, diaspora clubs, private equity).

HOW KICC EARNS: Dividends and gains, or 1-3% of capital

HOW KICC EARNS

From its own positions: dividends and equity appreciation over a long horizon, a higher-risk line likely to need its own regulatory review. From matching: a 1-3% facilitation fee on capital raised, with no licence complexity because KICC takes no position itself.

BEFORE IT CAN RUN

Investment policy, regulatory review, investor network.

86 Multi-zone SEZ marketplace

Investment matchmaking modelled at 67.5m a year at full maturity

Kenya has many special economic zones, each with a different operator, different plots and a different investor fit - so an investor's real decision is which zone, not whether. KICC treats each zone as inventory: zone operators list plots, tenant mix and infrastructure readiness once, and the investor searches and compares them in one place.

HOW KICC EARNS: 0.1-0.5% success fee + subscription

HOW KICC EARNS

A 0.1-0.5% success fee on committed investment whichever zone is chosen, plus a listing subscription for zone operators and a paid side-by-side zone comparison report for investors.

BEFORE IT CAN RUN

Zone operator onboarding, plot inventory, comparison data product.

87 Bulk trade brokerage

Trade commission modelled at 90.0m a year at full maturity

The opposite of smallholder aggregation: here the seller is already a large corporation with bulk supply. KICC provides market access and negotiation at scale, marketing that supply to institutions that need it - a hospital network needing bulk medical supplies, a hotel chain needing food-service inputs, an international buyer needing one large single-source order.

HOW KICC EARNS: 1-3% of matched bulk value

HOW KICC EARNS

A commission on matched bulk-trade value, typically thinner than smallholder aggregation because the transaction is much larger - 1-3% - with volume making up the difference.

BEFORE IT CAN RUN

Corporate supplier onboarding, institutional buyer pipeline, contract support.

PART THREE

Notes on the numbers

How each figure was produced

Each of the 87 pipelines is assigned a category, a steady-state annual revenue at full maturity, and a way of earning. The steady-state values are modelled estimates, not sourced market sizes: they were derived from the scale language inside the catalog itself, for example where one crop is described as

the largest export earner in its group and another as exploration-stage, combined with the commission ranges stated for each line. In the updated all-Year-1 model, revenue in any year is the steady-state value multiplied by the 1.5 scale factor and by the ramp percentage for that year, and every pipeline is at 100% by Year 5 because all of them open in Year 1.

Advertising and media cost is that year's revenue multiplied by the marketing-to-revenue ratio, and then split between screentime and airtime by each category's channel mix. It is treated as a cost of acquiring and keeping customers, so it reduces net revenue rather than appearing as a revenue line.

Four pipelines generate no fee of their own and are held at zero: the diaspora investment gateway (43), the government portal lead-scoring tool (53), the universal rating engine (79) and the airline agreement network (82). Their value is captured inside the pipelines they feed, which avoids counting the same shilling twice.

Two points of caution. This is a launch and adoption model, not a market-share or unit-economics model, so the outputs are directional rather than a budget figure. And the workbook that accompanies this document carries a first-launch-year column from the earlier staged-launch model; the updated plan supersedes it by opening all 87 lines in Year 1, so that column should not be read as a build sequence. Before any fundraising or budget commitment, the steady-state values should be replaced with sourced sector data from KNBS, the central bank and the sector boards.

Where each figure comes from

Figure	Source
Per-pipeline steady-state values, categories, 87-line inventory	kicc_revenue_model_v2.xlsx, Pipeline Model sheet
Five-year gross, advertising and net revenue; ramp percentages; marketing ratios; channel splits; rate card; target and improvement measures	kicc-revenue-plan.pdf (Consolidated Revenue Plan v2.0, all-Year-1 launch model)
What each pipeline is, how it earns and what it needs	kicc-full-pipeline-catalog.md, all 87 entries

This document was prepared for internal strategy and investment review. All figures are modelled estimates. The US dollar rate used throughout is KES 129.
