

KENYA INVESTMENT & COMMERCE CONNECT

Consolidated Revenue Plan — 87 Pipelines

Financial years 1-5, net of advertising and media cost — all pipelines launch Year 1

Version 2.0 — ALL-Y1 launch model — September 2026

This document consolidates the 87-pipeline catalog, a unified-Y1-launch revenue model, and a full advertising and media expenditure schedule for every sector, including screentime and airtime, all stated in Kenya Shillings.

All figures are modeled estimates. Exchange rate used: **KES 129 to the US Dollar**.

1. Executive Summary

The Corporation operates 87 revenue pipelines across 13 categories. Every pipeline is available from Year 1. Revenue in each year is determined by an adoption ramp curve that reflects onboarding speed for sellers, buyers, and investors — not by a pipeline build schedule. Year 5 represents full maturity for all 87 pipelines at the 1.5 scale factor applied in this model.

Measure	Year 1	Year 2	Year 3	Year 4	Year 5
Gross revenue (KES)	896,175,000	2,688,525,000	4,480,875,000	5,675,775,000	5,974,500,000
Advertising & media cost (KES)	125,464,500	295,737,750	403,278,750	397,304,250	358,470,000
Net revenue (KES)	770,710,500	2,392,787,250	4,077,596,250	5,278,470,750	5,616,030,000
Net run-rate at year-end (KES/month)	64,225,875	199,398,938	339,799,688	439,872,563	468,002,500
Target run-rate (KES/month)	1,548,000,000	1,548,000,000	1,548,000,000	1,548,000,000	1,548,000,000
Shortfall (KES/month)	1,483,774,125	1,348,601,062	1,208,200,312	1,108,127,437	1,079,997,500

Year 1 gross revenue of 896,175,000 is four times the previous staged-launch model, because all 87 pipelines contribute at the Year 1 ramp rate rather than earning zero before their assigned launch window. Year 5 net revenue of 5,616,030,000 represents full maturity.

2. Revenue Position, Years 1-5

The ramp curve for each pipeline is: Year 1 = 15% of steady-state, Year 2 = 45%, Year 3 = 75%, Year 4 = 95%, Year 5 = 100%. The curve is the same for all 87 pipelines. Variation in category performance comes from differences in steady-state value, not launch timing.

Revenue compounds as the ramp matures. The progression is:

- **Year 1** (896,175,000): All 87 pipelines at 15% adoption. Early-stage onboarding focused on high-value categories — marketplace, tourism, real estate — that have the shortest time-to-revenue per seller.
- **Year 2** (2,688,525,000): Ramp reaches 45%. Agriculture pipelines (coffee, horticulture, maize) begin contributing material volume. Rental network and financial services lines gain traction.
- **Year 3** (4,480,875,000): Ramp reaches 75%. Minerals (gold, gemstones, limestone) and logistics move through the ramp inflection point.
- **Year 4** (5,675,775,000): Ramp reaches 95%. Energy, escrow float, flagship venues and bulk trade approach maturity.
- **Year 5** (5,974,500,000): Full 100% ramp across all 87 pipelines. No pipeline remains in a ramp period.

3. Full-Maturity Position

Year 5 gross revenue of 5,974,500,000 is the platform's steady-state ceiling at the current scale factor of 1.5.

Position (stabilised)	KES
Gross revenue per year	5,974,500,000
Advertising & media cost per year (6% of revenue)	358,470,000
Net revenue per year	5,616,030,000
Net run-rate per month	468,002,500
Equivalent USD per month (at KES 129)	3627926

The USD 12,000,000 monthly target equals **KES 1,548,000,000 per month**. Year 5 net runs at 468,002,500 per month, a shortfall of 1,079,997,500. Closing this gap requires a scale factor above 1.5, regional corridor expansion (Section 8), or the capital-market lines succeeding in combination.

4. Category Profile

Year 5 revenue and advertising expenditure by category, both in KES.

Category	Year 5 revenue	Share	Year 5 advertising
Agriculture (15 pipelines)	1,470,000,000	23%	88,200,000
Minerals (6)	424,500,000	7%	25,470,000
Industrial & SEZ (5)	210,000,000	4%	12,600,000
Energy & Infra (4)	127,500,000	2%	7,650,000
Real Estate (6)	457,500,000	8%	27,450,000
Tourism (7)	787,500,000	13%	47,250,000
Commerce & Discovery (10)	810,000,000	14%	48,600,000
Logistics (4)	217,500,000	4%	13,050,000
Financial Services (7)	345,000,000	6%	20,700,000
Government (3)	127,500,000	2%	7,650,000
Additional Sectors (8)	210,000,000	4%	12,600,000
RE Rental Expansion (5)	420,000,000	7%	25,200,000
Flagship & Investment (7)	367,500,000	6%	22,050,000
Total	5,974,500,000	100%	358,470,000

Percentages may not sum to 100 due to independent rounding.

6. Media Rate Card — Unit Prices

[Same as before — no change]

The budgets above are deployed at prevailing Kenyan market rates. The card below is the reference for procurement and media planning; contract rates are negotiated against these benchmarks.

Screentime

Format	Unit	Rate (KES)
National terrestrial TV, prime-time 30-second spot	per spot	450,000 – 800,000
National TV, off-peak 30-second spot	per spot	150,000 – 350,000
Regional and vernacular TV, 30-second spot	per spot	40,000 – 120,000
Large-format billboard, Nairobi metro	per panel per month	250,000 – 650,000
County-town billboard	per panel per month	80,000 – 250,000
Digital out-of-home screen (mall and fuel-station networks)	per screen per month	35,000 – 120,000
Digital display and video	cost per 1,000 impressions	300 – 900
Cinema, 30-second spot	per screen per week	45,000 – 150,000

Airtime

Format	Unit	Rate (KES)
National radio, prime-time 30-second spot	per spot	30,000 – 95,000
Vernacular radio, 30-second spot	per spot	8,000 – 35,000
Community radio, 30-second spot	per spot	2,500 – 12,000
Sponsored talk segment, 30 minutes	per segment	100,000 – 400,000
Bulk SMS	per 100,000 messages	45,000 – 120,000
USSD campaign	per session	1 – 3
Digital audio (streaming and podcast)	cost per 1,000 impressions	250 – 700

7. Channel Strategy by Sector

[Same as before — no change]

The screentime-to-airtime split differs by category. Each split follows where the sector's buyers are reached.

Agriculture — 70% airtime. Smallholder farmers are reached primarily through vernacular and county radio. Screentime is reserved for the export-facing segments (cut flowers, avocado, macadamia) where buyers are corporate.

Government — 65% airtime. County service announcements and licensing messages travel best over radio and SMS; television is used for national campaigns only.

Tourism — 75% screentime. Tourism buyers research visually before booking. Television, video platforms, and digital out-of-home carry the booking volume.

Real Estate and Rental — 70% screentime. Property decisions are visual and location-specific. Static out-of-home near target neighbourhoods and digital display dominate.

Minerals and Industrial — 60% airtime / 40% screentime. Investor audiences are reached through business press, digital video, and targeted radio, not mass television.

Commerce — 65% screentime. Digital display and video drive B2B marketplace sign-ups; radio covers the county-pavilion and farm-trade segments.

Financial Services — 60% screentime. Financial products need credible visual formats; SMS and mobile channels carry the transactional reminders.

Logistics and Additional Sectors — 50/50. No channel dominates; budget follows campaign-by-campaign test results.

8. The Target Gap and the Improvement Programme

The USD 12,000,000 monthly steady-state target equals **KES 1,548,000,000 per month**. Year 5 nets to 468,002,500 per month. The shortfall of 1,079,997,500 per month is structural; all 87 pipelines are already at full ramp. Closing the gap depends on lifting the scale factor or expanding the addressable market.

8.1 Onboarding speed programme

All 87 pipelines are available from Year 1. The ramp curve (15%, 45%, 75%, 95%, 100%) is determined by the speed at which sellers, buyers and investors are onboarded onto each pipeline.

Measures to raise boarding speed:

- Pre-onboard the top 20 county governments with committed pavilion trade and collection volumes before Year 1 launch, lifting the Year 1 ramp from 15% to 20% and Year 2 ramp from 45% to 55%. Estimated cumulative benefit Years 1–4: **KES 180,000,000 – 240,000,000**.
- Deploy a single-credential onboarding flow across all 87 pipelines so that a verified seller on any pipeline is pre-approved for every other pipeline, reducing friction.
- Incentivise cross-pipeline referrals through the Trust Score algorithm (higher weight for multi-pipeline activity).

8.2 Pricing discipline on the four anchor categories

Holding the marketplace commission floor at 2.5% rather than 2.0%, and pricing the tourism merchant-of-record bundle at a 25% blended commission rather than 20%, adds an estimated **KES 150,000,000 – 200,000,000 to Year 5 revenue** without requiring new buyers.

8.3 Regional roll-out into the East African corridor

Extending the marketplace and rental networks into Tanzania, Uganda, and Rwanda along the Mombasa–Nairobi–Lake Victoria corridor raises the scale factor from 1.5 to 2.0 by Year 5. At a 2.0 factor, Year 5 gross revenue reaches approximately **KES 7,966,000,000**, and net run-rate rises from 468,002,500 to

approximately **KES 625,000,000 per month**. The corridor expansion is the single highest-lift measure in the programme.

8.4 Capital-market lines at scale

Direct lending is the largest single lever on revenue capacity once licensed. A lending book of KES 2,000,000,000 at a 6% net margin contributes KES 120,000,000 per year, compounding as the book grows. This line is modeled as an option pending CBK approval, not as committed revenue.

8.5 Effect of the programme

Scenario	Year 5 gross (KES/yr)
Base model (all-Y1 launch, scale 1.5)	5,974,500,000
Base + onboarding incentives (8.1) + pricing (8.2)	6,400,000,000 – 6,700,000,000
With regional roll-out at 2.0 scale factor	7,966,000,000
With regional + capital markets	8,500,000,000 – 9,000,000,000

Even with all measures combined, the USD 12,000,000 monthly target (KES 18,576,000,000 per year) is not reached within five years at the current steady-state estimates. The target is feasible with the regional corridor and licensed lending succeeding in combination, plus a scale factor of 2.5 or higher beyond Year 5.

9. Priority Execution List

The fifteen largest pipelines by steady-state value. These are the onboarding priority for Years 1 and 2.

Rank	Pipeline	Steady-state (KES/yr)
1	General marketplace commission	300,000,000
2	Wildlife & safari tourism	200,000,000
3	Horticulture — cut flowers	150,000,000
4	Gold — ASM formalisation	150,000,000
5	Coastal & beach tourism	150,000,000
6	Universal rental & lease placement	120,000,000
7	Horticulture — avocado	100,000,000
8	Maize domestic distribution	90,000,000
9	Residential sale	90,000,000
10	Livestock & dairy	80,000,000
11	Horticulture — macadamia	70,000,000
12	Residential rental	70,000,000
13	Airbnb / short-let with experience cross-sell	70,000,000
14	Horticulture — French beans and vegetables	60,000,000
15	Limestone, sand and aggregates	60,000,000

10. Risk Register

1. **Onboarding ramp.** All 87 pipelines launch Year 1, so the entire model rests on the speed of seller and buyer onboarding across categories simultaneously. A slower ramp compounds across all pipelines. Mitigation: quarterly reforecast against signed pipeline volume, not expected volume.
 2. **Regulatory timing.** Direct lending, equity facilitation, and escrow float require CBK action and are outside the Corporation's control. Mitigation: carry as options; do not fund operations against them.
 3. **Concentration.** Four categories carry 75% of Year 5 revenue. Mitigation: assign a named owner for each category; report category-level actuals monthly.
 4. **Estimate quality.** Steady-state values derive from the catalog's scale language, not sourced sector data. Mitigation: commission KNBS, CBK, and sector-board validation before fundraising use.
 5. **Advertising efficiency.** The marketing ratio (14% down to 6%) assumes acquisition cost declines as the brand compounds. If cost-per-acquisition does not fall, either spend rises or ramp slows. Mitigation: track cost per verified seller and cost per transaction monthly.
-

11. Governance

- The model is re-run quarterly against actuals; ramp assumptions change with evidence.
 - Advertising budgets in Section 5 are ceilings, released by the chief commercial officer per category, per quarter, and reconciled against the Section 6 rate card.
 - The net-revenue position, shortfall to target, and the category actuals report to the board monthly.
-

Prepared for internal strategy and investment review. All figures modeled; see the accompanying workbook for the pipeline-level calculations.
