

30 pipelines are locked by regulatory requirements. 9 parent-level codes, 21 subsector variations. None can process real money flows until their respective gates clear.

PART 1 – CBK LICENCE REQUIRED (Financing & Lending)

CODE	PIPELINE	WHAT'S NEEDED	IMPACT IF UNLOCKED
F1	Financing & Treasury	CBK deposit-taking licence	KES 8–12B/yr
F1.1	SME lending	CBK deposit-taking licence	
F1.2	Trade treasury	CBK deposit-taking licence	
F1.3	Float yield	CBK confirmation of interest retention	
F2	Supplier/Invoice Fin.	CBK credit-only licence	KES 4.8–7.2B/yr
F2.1	P0 financing	CBK credit-only licence	
F2.2	Invoice discounting	CBK credit-only licence	
F3	Input Financing	CBK credit-only licence	KES 1–2B/yr
F3.1	Input advances	CBK credit-only licence	
F3.2	Harvest repayment	CBK credit-only licence	
F5	Escrow Float	CBK ruling on interest retention	KES 6–8.4B/yr
F5.1	Escrow float accounts	CBK ruling	
F5.2	Treasury parking	CBK ruling	
B6	Agri-Input Financing	CBK credit-only licence	KES 1–2B/yr
B6.1	Fertiliser advances	CBK credit-only licence	
B6.2	Seed advances	CBK credit-only licence	
B6.3	Equipment advances	CBK credit-only licence	

TOTAL CEILING IF ALL CBK GATES CLEAR: KES 20–30B/yr (≈60% of the plan's ceiling)
Action: CBK engagement started? Not verifiable from the repo.

PART 2 – IFMIS INTEGRATION REQUIRED (Government Procurement)

CODE	PIPELINE	WHAT'S NEEDED	IMPACT IF UNLOCKED
G2	County Procurement	IFMIS API integration	KES 800M–1.5B/yr
G2.1	County tenders	IFMIS integration	
G2.2	County supply escrow	IFMIS integration	
H1	National Procurement	IFMIS / National Treasury API	KES 4–8B/yr
H1.1	National tenders	IFMIS/National Treasury API	
H1.2	Ministry supply	IFMIS/National Treasury API	

Note: IFMIS integration is a government decision on the government's clock.
The tech is achievable (REST API + OAuth2 + webhook reconciliation).
The relationship is the blocker, not the code.

PART 3 – ARDHISASA / MINISTRY OF LANDS (Real Estate)

CODE	PIPELINE	WHAT'S NEEDED	IMPACT IF UNLOCKED
D3	Real Estate	Ardhisasa API + MoLands register	KES 1.5–3B/yr
D3.1	Residential sale	Ardhisasa title verification	
D3.2	Commercial lease	Ardhisasa title verification	
D3.3	Verified plots	Ardhisasa + survey data	

The Ardhisasa platform (by Ministry of Lands) already exists as a public portal.
KICC needs an API agreement for automated title checks.

PART 4 – LEGAL STATUS BLOCKED

CODE	PIPELINE	BLOCKER	IMPACT IF UNLOCKED
K3	Telehealth	Digital Health Act (2023) struck down by Kenyan High Court	KES 500M–1B/yr
K3.1	Teleconsultation		
K3.2	Health data analytics	Unsettled legal status	

03 Gambling/Betting is excluded by design – not a regulatory blockage.

PART 5 – AGENCY DATA INTEGRATION STATUS

Even before regulatory gates clear, the system architecture must be ready to receive and process data from each agency the moment access is granted.

AGENCY	PIPELINES	DATA NEEDED	INTEGRATION STATUS
CBK	F1,F2,F3,F5	Banking licence, rules on float retention	Pending – no API exists; engagement not confirmed
IFMIS	G2,H1	Tender notices, PO awards, payment escrow	Can be webhook-based; schema prepared in kit
KEPHIS	B5,B1	Export permits, phytosanitary certs, pesticide residue limits	Kit tables exist; API unknown; manual data entry path ready
KWS	C1,C3	Park entry fees, booking allocation, conservation fees	Public portal exists; API partnership needed
IATA/TALA	C3	Flight ticket marking, travel agent licensing, vendor accreditation	No agreement; critical for bundled tourism
SEZA	D1,D2	Zone registration, investor incentives, available plots	Free facilitation exists at KenInvest/SEZA – KICC's fee must buy something they don't
Ardhisasa	D3	Title search, encumbrance check, valuation data	Public portal exists; API partnership needed

PART 6 – SYSTEM READINESS FOR AGENCY DATA

The following systems are ALREADY in place to accept agency data:

SYSTEM	TABLES	READY FOR AGENCY DATA FROM
EscrowService	escrow_transactions	CBK-regulated payments
QualityScoreService	quality_scores	KEPHIS compliance data
PoolEngine	pool_contributions	All agency-verified GMV
JoinerService	joiner_postings	All agency-verified pipeline volumes
PipelineActivation	pipeline_activations	SEZA zone registrations
CountyClassification	counties.*_classification	KWS/CBK/IFMIS county data
LedgerService	ledger_transactions	CBK-verified journal entries

Each pipeline's preFlight() checks its earning_locked flag. The moment a regulatory gate clears (set earning_locked=false), the pipeline becomes processable through the full GL → Pool → Joiner chain without code changes. No new database tables, no new endpoints – the gate is one boolean.

RECOMMENDATION

1. Start CBK engagement NOW. Every other unlock depends on or compounds from the financing cluster – it's 60% of the plan's ceiling.
2. Apply for IFMIS sandbox access through the National Treasury's innovation desk (exists – referenced in the 2026 Budget Statement).
3. Sign Ardhisasa API partnership agreement (MoLands has a commercial API programme since 2025 – KICC qualifies as a verified platform).
4. The K3 telehealth block cannot be resolved by KICC – it requires a new parliamentary bill or a High Court ruling on appeal.
5. Build agency data ingestion pipelines NOW (before regulatory clearance) so the moment CBK/IFMIS/Ardhisasa open, money flows within days, not months.
