

KICC National Exhibition Platform

Expenditure Statement

Period: August 2 - August 20, 2026 | Prepared: August 21, 2026

Methodology & Verification

This statement collates expenditures from three sources: (1) Graphics & R&D Department certified bank statements for digital service subscriptions, (2) supplier invoices and delivery notes with serial numbers for physical equipment, and (3) field operations records for remuneration. All amounts are in Kenyan Shillings (KES) unless noted. Digital service subscriptions are reported at the invoiced amount in original currency. Physical equipment items are verified against delivery notes and serial numbers where available. Field operations remuneration is recorded against signed delivery receipts from Muranga County.

Equipment Justification: 4D Immersive Video Pipeline

The cinema-grade capture equipment listed in this statement is purpose-acquired for the platform's 4D immersive video generation pipeline, not for general photography or videography. This distinction is critical to understanding the expenditure:

The platform's competitive differentiator is its ability to generate 4D immersive walkthrough videos from still photographs - a process that requires multi-angle capture at resolutions sufficient for photogrammetry (structure-from-motion), Gaussian splatting, and depth-map estimation. Consumer-grade cameras cannot produce the consistent, high-resolution multi-burst sequences needed for this pipeline.

The Canon EOS R5 Mark II (45MP, 8K) and Canon EOS C50 (professional cinema) serve as the primary capture rigs for photogrammetry source material. The RF 70-200mm f/2.8 and RF 24-70mm f/2.8 L-series lenses provide the optical consistency required for SfM reconstruction. The DJI RS 4 gimbal enables smooth multi-angle orbital captures. The Insta360 X5 provides 360-degree environmental context for the 3D reconstruction pipeline. The SanDisk 4TB Extreme SSDs are the working storage for the multi-gigabyte photogrammetry datasets - each location capture generates 50-200GB of source imagery.

The additional equipment in the second procurement (Canon R6 Mark III, RF 15-35mm, RF 100-300mm, DJI Mavic 4 Pro, Nanlite FC-720B LEDs, EcoFlow Delta 2 Max) expands the capture pipeline for aerial cinematography (drone), wide-angle architectural coverage, telephoto detail capture, and field lighting for interior venue shoots. The Apple MacBook Pro M5 (32GB) serves as the field workstation for the assistant software developer to run the capture pipeline on-site.

Without this equipment, the 4D video pipeline has no source material. Every item listed is a direct input to the generative content system that powers the county immersive video features.
