

KICC National Exhibition Platform

Forward Funding Proposal

Phase 2: Production Scale-Up & Integration

Executive Summary

The KICC platform has delivered a production-grade digital infrastructure serving all 47 Kenyan counties in 18 days. Phase 1 (core platform, marketplace, trade system, admin panels, 4D pipeline) is complete. Phase 2 requires funding to activate 27 stubbed API integrations, deploy automation workflows, scale the 4D content production pipeline, and complete the SEO optimization program. This proposal requests KES 3,974,500 one-time equipment + USD 8,470/month subscriptions to bring the platform to full production readiness.

1. Phase 1 Delivered (Complete)

Live production site at kicctest.org serving through Cloudflare edge network. 47 county public pages with admin dashboards. Marketplace with escrow commerce. Trade system with EAC/COMESA/AfCFTA/WTO blocs. KICC Mother Admin. AI-powered 3D/4D content pipeline. 148 automated tests. 27 integration pipelines built but awaiting activation. 3 N8n automation workflows built but undeployed.

2. Funding Request

Item	Amount
Additional Equipment (Data Collection & Production)	KES 3,974,500.00
Monthly Subscriptions (13 services)	USD 8,470.00/mo
TOTAL ONE-TIME FUNDING REQUEST	KES 3,974,500.00
TOTAL MONTHLY RECURRING	USD 8,470.00/mo

3. What This Funding Unlocks

Government API Activation (9 services)

KRA PIN auto-verification, Huduma Namba ID check, NTSA vehicle/license lookup, KWS park data, Tourism star ratings, Museums heritage data, Health facility verification, Agriculture market prices, Education institution verification. Removes all manual document upload flows.

Payment Gateway Activation (6 drivers)

M-Pesa STK Push for mobile money, Stripe for international cards, Airtel Money, T-Kash, Bank EFT, Crypto. Enables real revenue collection from marketplace orders and event bookings.

4D Content Pipeline (6 engines)

Wan2GP, Hailuo, Kling, Wan, Tripo3D, ROAD. Enables automated generation of 4D immersive walkthrough videos from still photographs. Currently only FFmpeg Ken Burns is active.

N8n Automation (3 workflows + 26 events)

County content auto-publish, international trade promotion, SBS 3D processing. 26 platform events already wired but unconnected to the N8n server.

SEO Optimization (11 items)

Dynamic sitemaps per county, Schema.org JSON-LD, Core Web Vitals optimization, breadcrumb navigation, AI image alt tags, Google Business Profile sync.

Production Infrastructure (3 services)

Elasticsearch for full-text search with typo tolerance (replaces MySQL LIKE queries). Redis for production caching and queue. OpenWeather for live county weather data.
